PROJECT

- Heritage Connect – An E-commerce Platform**
 - Developed a web-based platform to preserve cultural heritage and providing artisans with a sustainable source of income.
 - Designed a user-friendly interface for easy navigation and better user experience.
 - Designed to bridge the gap between traditional craftsmen and modern consumers.
 - Used technologies like HTML, CSS, JavaScript and backend used Node.js MongoDB, Express.js).
- Samvaad@BGI – An Anonymous Messaging Platform**
 - Developed a web-based platform for especially college students to express their thoughts, share feedback, and connect with the mentors – all while ensuring privacy and security.
 - This helps to bridge the gap between students and faculty, encouraging open, supportive communication.
 - Designed a simple and user-friendly interface and developed basic modules for sending and receiving message.
 - Used technologies like HTML, CSS, JavaScript and for backend used Node.js MongoDB, Express.js, JWT.
